### Sharing Multimedia on the Internet and the Impact for Online Privacy

### Dr. Gerald Friedland Senior Research Scientist International Computer Science Institute Berkeley, CA <u>friedland@icsi.berkeley.edu</u>

On average, how often are you posting images and videos on the Internet (e.g. Facebook, Flickr, Craigslist) ?

- a) Never
- b) About once a month or less
- c) About once a week
- d) About once a day
- e) More than once a day

## A Popular Introduction to the Problem

How would you judge the issue raised by Colbert?

- a) It's a comedy. I don't worry about any of this.
- b) There is some truth to it but its mostly exaggarated.
- c) It's a comedy depection of the reality but most of the stuff is becoming an issue.

d) He only touched a small part of the problem. The actual issues are even more serious.

 Many Internet sites and mobile apps encourage sharing of data too easily and users follow.

•Users **and** even engineers often unaware of (hidden) search and retrieval possibilities of shared data.

•Local privacy protection ineffective against inference across web-sites.

 People want to post on the Internet and like a highly-personalized web experience.

 Industry is improving search and retrieval techniques so that people can find the posts.

•Governments improve search and retrieval to do forensics and intelligence gathering

INTERNATIONAL COMPUTER SCIENCE INSTITUTE

•The previous described issues are a problem with any type of public or semipublic posts and are not specific to a certain type of information, e.g. text, image, or video.

•However, let's focus on multimedia data: images, audio, video.

- YouTube claims <del>65k</del> 100k video uploads per day, or <del>48h</del> 72h per minute.
- Flickr claims 1M images uploads per day
- Twitter: up to 120M messages per day

## **Resulting Problem**

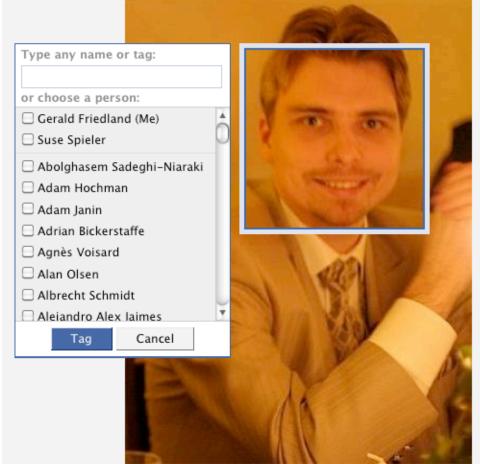

- More multimedia data = Higher demand for retrieval and organization tools.
- But multimedia retrieval is hard
  - Researchers work on making retrieval better.
  - Industry develops workarounds to make retrieval easier right away.

- Retrieval is already good enough to cause major issues for privacy that are not easy to solve.
- Let's take a look at some retrieval approaches:
  - Geotagging
  - Multimodal Location Estimation
  - Audio-based user matching

## Workaround: Manual Tagging

### **Geo-Tagging**

# Allows easier clustering of photo and video series as well as additional services.

Social media portals provide APIs to connect geo-tags with metadata, accounts, and web content.

Portal	%	Total
YouTube (estimate)	3.0	3M
Flickr	4.5	180M

Allows easy search, retrieval, and ad placement.

# Mayhemic Labs, June 2010: "Are you aware that Tweets are geo-tagged?"

Question

## Did you know about geo-tagging and it's potential?

- a) I had never heard about geo-tagging before.
- b) I knew about geo-tagging but never thought about what it could be used for.
- c) I knew about geo-tagging and knew the potential for photo organization and retrieval
- d) I know about geo-tagging, it's use and the privacy risks.
- e) I only heard about privacy risks of geo-tagging but never really thought about what it is good for.

Since geo-tagging is a workaround for multimedia retrieval, it allows us to peek into a future where multimedia retrieval works.

What if multimedia retrieval actually worked?

### Burglars Picked Houses Based on Facebook Updates

By NICK BILTON

Illustration by Nick Bilton/The New York Times

Do you think geo-tagging should be illegal?

- a) No, people just have to be more careful. The possibilities still outweigh the risks.
- b) Maybe it should be regulated somehow to make sure no harm can be done.

c) Yes, absolutely this information is too dangerous.

# Is this really about geo-tags? (remember: hypothesis)

# **Sources of the Berkeley Multimodal Location Estimation Project**

### http://mmle.icsi.berkeley.edu

## Multimodal Location Estimation

SCIENCE

We infer location of a Video based on visual, audio, and tags:

•Use geo-tagged data as training data

•Allows faster search, inference, and intelligence gathering even without GPS.

G. Friedland, O. Vinyals, and T. Darrell: "Multimodal Location Estimation," pp. 1245-1251, ACM Multimedia, Florence, Italy, October 2010.

### YouTube Cybercasing Revisited

	Old Experiment	No Geotags
Initial Videos	1000 (max)	107
User Hull	~50k	~2000
Potential Hits	106	112
Actual Targets	>12	>12

YouTube Cybercasing with Geo-Tags vs **Multimodal Location Estimation** 

## Do you think research about geo-location should be abandonend?

- a) No, of course not.
- b) No, but regulated.
- c) Yes, absolutely.

### Is this really only about geo-location?

No, it's about the privacy implications of multimedia retrieval in general.

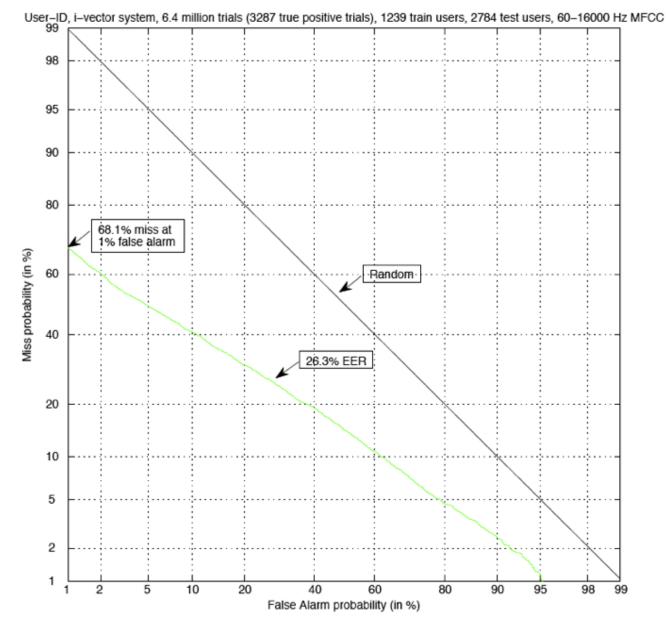

### Idea: Can one link videos across acounts? (e.g. YouTube linked to Facebook vs anonymized dating site)

### I N T E R N A T I O N A L COMPUTER SCIENCE I N S T I T U T E

### **User ID on Flickr videos**

### Result:

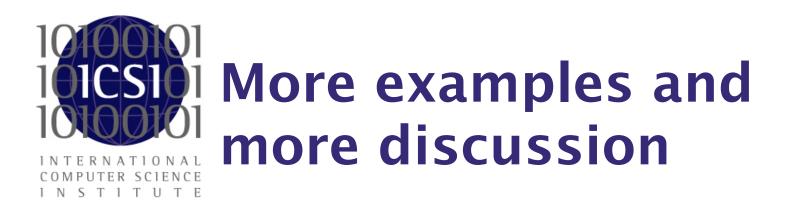

On average having 20 videos in the test set leads to a 99% chance for a true positive match!

H. Lei, J. Choi, A. Janin, and G. Friedland: "Persona Linking: Matching Uploaders of Videos Accross Accounts", at IEEE International Conference on Acoustic, Speech, and Signal Processing (ICASSP), Prague, May 2011

And now? What do you think has to be done?

- a) Nothing can be done. Privacy is dead.
- b) We need to educate people about this and try to save privacy. (fight)
- c) I will really think before I post, and I agree with b).
- d) I will really think before I post, and I agree with a).
- e) I won't post anything anymore! (flee)
