CS10 The Beauty and Joy of Computing

Lecture #10 Social Implications of Computing

2011-02-28

Hello to Kara
Holmes in Nashville,
TN

CS10 CHOSEN AS UC ONLINE PILOT!

Having just returned from the UC Online Pilot Project Workshop, I have great news to report ... CS10 has been chosen as one of 30 courses (all across 10 UC campuses) to receive Pilot funding for online instruction! Fully online or blended.

Overview

- **META: This course is NOT just about programming!**
 - **Lecs + Reading: Big ideas**
 - **Labs: Programming**
 - **Disc: Distillation**
- **META: plug CS195 Social Implications of Computers**
- **Computers in Education**
 - **Most important use?**
 - **Judah Schwartz' continuum**
 - **RSA Animate "Changing Education Paradigms"**
 - **UC Online Pilot**
 - **CS10 Online**

Peer Instruction (thanks to BH)

The most important use of computers in education so far...

- a) Web search
- b) Arithmetic drill programs
- c) Word processing
- d) iclicker-like technologies
- e) Social networking

Answer

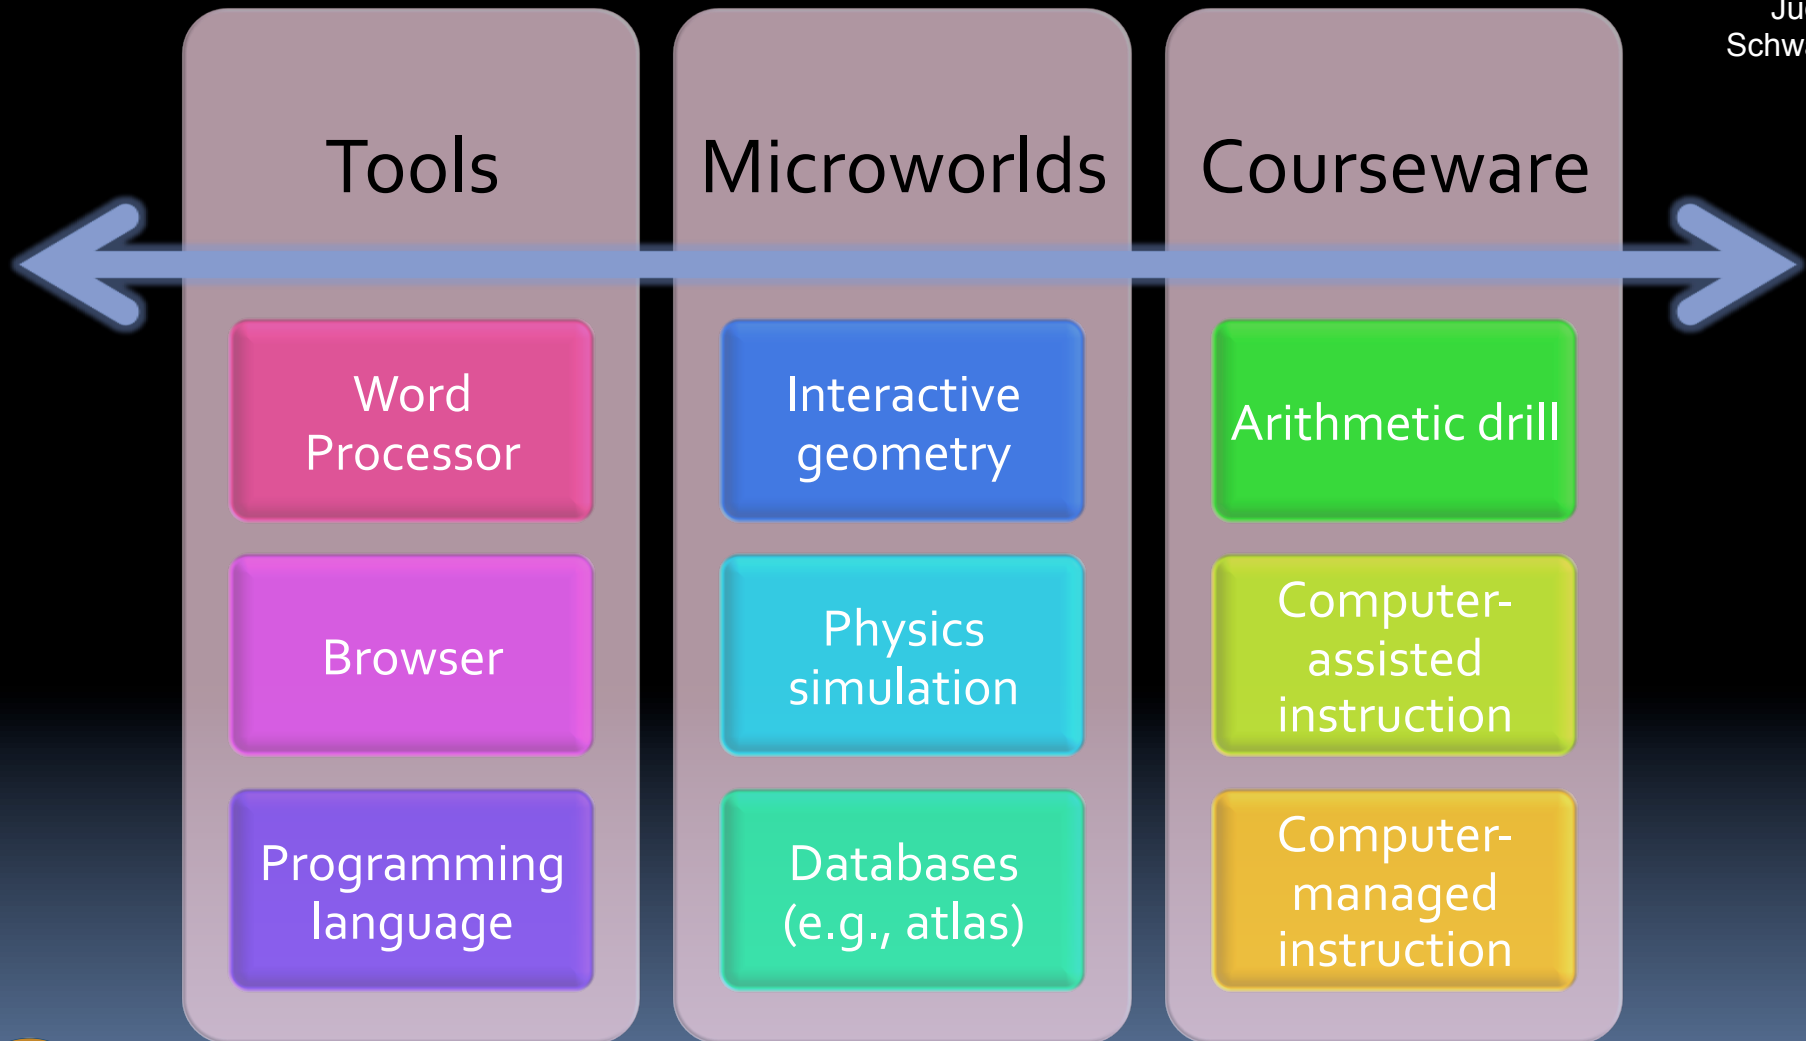

- *“Multiple choice tests have changed what counts as knowledge in schools. Open-ended questions were the norm 30 years ago. The kind of knowledge you can report on multiple-choice tests is unimportant in the big scheme of things, and what’s really important is not what you already know, but how you can take what you already know and apply it something you’ve never seen before. Multiple choice tests make that hard. Teaching follows tests! The folks who invented Standardized Testing didn’t foresee how it would affect what knowledge means! (unintended consequence)” – Brian Harvey*

RSA Animate : Changing Education Paradigms

UC Berkeley Online Pilot

- Basics of Pilot
 - Blended vs Online
- What should we do?
 - How can CS10 be the course for everyone?
 - How can we use peers?
 - What'd help you most?
- Would you take this course if it'd been offered at another UC?
 - Does f2f matter?

UC Berkeley EECS
CS10 : The Beauty and Joy of Computing
 Spring 2011

Overview

CS10, *The Beauty and Joy of Computing*, is an exciting new course offered by the UC Berkeley EECS Dept. Computing has changed the world in profound ways. It has opened up wonderful new ways for people to connect, design, research, play, create, and express themselves. However, just using a computer is only a small part of the picture. The real transformative and empowering experience comes when one learns how to program the computer, to translate ideas into code. This course will teach students how to do exactly that, using [BYOB](#) (based on [Scratch](#)), one of the friendliest programming languages ever invented. It's purely graphical, which means programming involves simply dragging blocks around, and building bigger blocks out of smaller blocks.

But this course is far more than just learning to program. We'll focus on some of the "Big Ideas" of computing, such as abstraction, design, recursion, concurrency, simulations, and the limits of computation. We'll show some beautiful applications of computing that have changed the world, talk about the history of computing, and where it will go in the future. Throughout the course, relevance will be emphasized: relevance to the student and to society. As an example, the final project will be completely of the students' choosing, on a topic most interesting to them. The overarching theme is to expose students to the beauty and joy of computing. This course is designed for computing non-majors, although interested majors are certainly welcome to take the class as well! We are especially excited about bringing computing (through this course) to traditionally under-represented groups in computing, i.e., women and ethnic minorities.

Some context: in the Fall of 2009, we piloted a 2-unit version of this course as the freshman/sophomore seminar [CS39N: The Beauty and Joy of Computing](#) to 20 students. It was such a success that we decided to move ahead to make this course our new computing course for non-majors, replacing the venerable [CS3](#); however, we still offer the self-paced course [CS35](#) for those interested in learning to program in Scheme. Last fall (2010) was a 90-person pilot and we're continuing to grow the course as word spreads to more students. We're continually replacing the weakest parts of the curriculum and hope you'll enjoy!

We will be using Pair Programming, described best by Laurie Williams, a computer science professor at North Carolina State University: "Two programmers working side-by-side, collaborating on the same design, algorithm, code or test. One programmer, the driver, has control of the keyboard/mouse and actively implements the program. The other programmer, the observer, continuously observes the work of the driver to identify tactical (syntactic, spelling, etc.) defects and also thinks strategically about the direction of the work. On demand, the two programmers can brainstorm any challenging problem. Because the two programmers periodically switch roles, they work together as equals to develop software.

We are delighted to announce that this course was recently chosen as one of the [5 National pilots](#) by the [CollegeBoard](#) (the folks that offer Advanced Placement exams) as a model for an exciting new [First Course in Computing: Computer Science : Principles](#). Our intent is to provide this entire course, through [Creative Commons](#), to the global community. As an example, all of our [lecture webcasts are available](#), our readings are all free (linked from our calendar), and our labs and homework are publicly available via our [Moodle server](#) (also linked from our calendar). We'll package the whole thing into a single zip file at the end of the Fall 2010 semester. We'll even provide High Definition lecture videos with extra cool content! As well, we've been working closely with three local high school computer science teachers to develop this course, and they may run variants of this course at their school in the near future:

- ✕ Josh Paley of [Gunn High School](#) in Palo Alto, CA
- ✕ Eugene Lemon of [Ralph Bunche High School](#) in Oakland, CA
- ✕ Ray Pedersen of [Albany High School](#) in Albany, CA

Student feedback from Fall 2010.
