

# CS-184: Computer Graphics

## Lecture #18: Forward and Inverse Kinematics

Prof. James O'Brien  
University of California, Berkeley

V2009-F-18-1.0

### Today

- Forward kinematics
- Inverse kinematics
  - Pin joints
  - Ball joints
  - Prismatic joints

2

Sunday, November 15, 2009

## Forward Kinematics

- Articulated skeleton
  - Topology (what's connected to what)
  - Geometric relations from joints
  - Independent of display geometry
  - Tree structure
    - Loop joints break "tree-ness"

3

## Forward Kinematics

- Root body
  - Position set by "global" transformation
  - Root joint
    - Position
    - Rotation
  - Other bodies relative to root
  - **Inboard toward the root**
  - **Outboard away from root**

4

## Forward Kinematics

- A joint

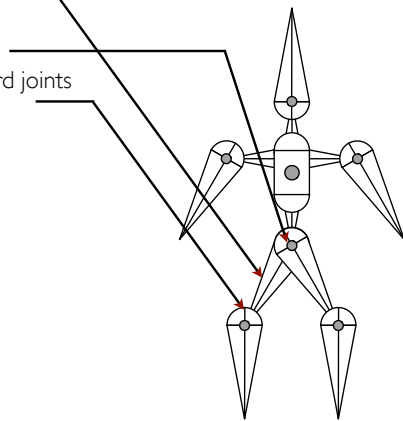

- Joint's inboard body
- Joint's outboard body

## Forward Kinematics

- A body

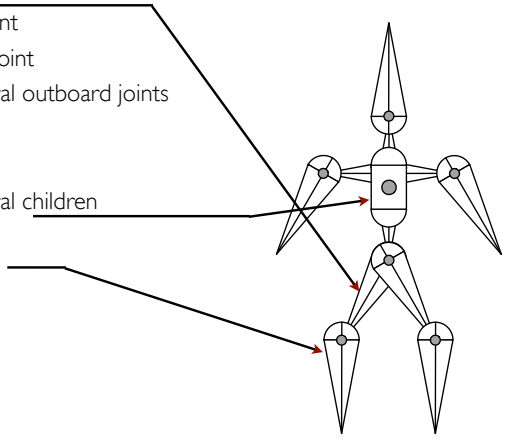

- Body's inboard joint
- Body's outboard joint
- May have several outboard joints

## Forward Kinematics

- A body

- Body's inboard joint
- Body's outboard joint
  - May have several outboard joints
- Body's parent
- Body's child
  - May have several children

## Forward Kinematics

- Interior joints

- Typically not 6 DOF joints
- Pin - rotate about one axis
- Ball - arbitrary rotation
- Prism - translation along one axis

## Forward Kinematics

- Pin Joints

- Translate inboard joint to local origin
- Apply rotation about axis
- Translate origin to location of joint on outboard body

9

## Forward Kinematics

- Ball Joints

- Translate inboard joint to local origin
- Apply rotation about arbitrary axis
- Translate origin to location of joint on outboard body

10

# Forward Kinematics

- Prismatic Joints

- Translate inboard joint to local origin
- Translate along axis
- Translate origin to location of joint on outboard body

11

# Forward Kinematics

- Composite transformations up the hierarchy

12

# Forward Kinematics

- Composite transformations up the hierarchy

13

# Forward Kinematics

- Composite transformations up the hierarchy

14

# Forward Kinematics

- Composite transformations up the hierarchy

15

# Forward Kinematics

- Composite transformations up the hierarchy

16

# Inverse Kinematics

- Given
  - Root transformation
  - Initial configuration
  - Desired end point location
- Find
  - Interior parameter settings

17

# Inverse Kinematics

Egon Pasztor

18

Sunday, November 15, 2009

# Inverse Kinematics

- A simple two segment arm in 2D

# Inverse Kinematics

- Direct IK: solve for the parameters

# Inverse Kinematics

- Why is the problem hard?
  - Multiple solutions separated in configuration space

21

# Inverse Kinematics

- Why is the problem hard?
  - Multiple solutions connected in configuration space

22

## Inverse Kinematics

- Why is the problem hard?
  - Solutions may not always exist

23

## Inverse Kinematics

- Numerical Solution
  - Start in some initial configuration
  - Define an error metric (e.g. goal pos - current pos)
  - Compute Jacobian of error w.r.t. inputs
  - Apply Newton's method (or other procedure)
  - Iterate...

24

# Inverse Kinematics

- Recall simple two segment arm:

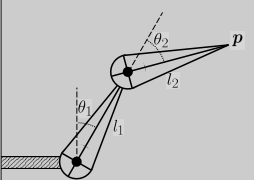

# Inverse Kinematics

- We can write of the derivatives

## Inverse Kinematics

**Direction in Config. Space**

$$\theta_1 = c_1 \theta_*$$
$$\theta_2 = c_2 \theta_*$$
$$\frac{\partial p_z}{\partial \theta_*} = c_1 \frac{\partial p_z}{\partial \theta_1} + c_2 \frac{\partial p_z}{\partial \theta_2}$$

27

## Inverse Kinematics

### The Jacobian (of $p$ w.r.t. $\theta$ )

$$J_{ij} = \frac{\partial p_i}{\partial \theta_j}$$

### Example for two segment arm

$$J = \begin{bmatrix} \frac{\partial p_z}{\partial \theta_1} & \frac{\partial p_z}{\partial \theta_2} \\ \frac{\partial p_x}{\partial \theta_1} & \frac{\partial p_x}{\partial \theta_2} \end{bmatrix}$$

28

## Inverse Kinematics

### The Jacobian (of $p$ w.r.t. $\theta$ )

$$J = \begin{bmatrix} \frac{\partial p_z}{\partial \theta_1} & \frac{\partial p_z}{\partial \theta_2} \\ \frac{\partial p_x}{\partial \theta_1} & \frac{\partial p_x}{\partial \theta_2} \end{bmatrix}$$

$$\frac{\partial \mathbf{p}}{\partial \theta_*} = J \cdot \begin{bmatrix} \frac{\partial \theta_1}{\partial \theta_*} \\ \frac{\partial \theta_2}{\partial \theta_*} \end{bmatrix} = J \cdot \begin{bmatrix} c_1 \\ c_2 \end{bmatrix}$$

29

## Inverse Kinematics

### Solving for $c_1$ and $c_2$

$$\mathbf{c} = \begin{bmatrix} c_1 \\ c_2 \end{bmatrix} \quad d\mathbf{p} = \begin{bmatrix} dp_z \\ dp_x \end{bmatrix}$$

$$d\mathbf{p} = J \cdot \mathbf{c}$$

$$\mathbf{c} = J^{-1} \cdot d\mathbf{p}$$

30

# Inverse Kinematics

**Solving for  $c_1$  and  $c_2$**

$e = dp$

$dp = J \cdot c$

$c = J^{-1} \cdot dp$

Is the Jacobian invertible?

31

# Inverse Kinematics

- Problems
  - Jacobian may (will!) not always be invertible
    - Use pseudo inverse (SVD)
    - Robust iterative method
  - Jacobian is not constant
- Nonlinear optimization, but problem is (mostly) well behaved

$$J = \begin{bmatrix} \frac{\partial p_z}{\partial \theta_1} & \frac{\partial p_z}{\partial \theta_2} \\ \frac{\partial p_x}{\partial \theta_1} & \frac{\partial p_x}{\partial \theta_2} \end{bmatrix} = J(\theta)$$

32

## Inverse Kinematics

- More complex systems
  - More complex joints (prism and ball)
  - More links
  - Other criteria (COM or height)
  - Hard constraints (joint limits)
  - Multiple criteria and multiple chains

33

## Inverse Kinematics

- Some issues
  - How to pick from multiple solutions?
  - Robustness when no solutions
  - Contradictory solutions
  - Smooth interpolation
    - Interpolation aware of constraints

34

Sunday, November 15, 2009

# Inverse Kinematics

**Prism Joints**

$p_z = l_1$   
 $p_x = d$

$p_z = l_1 + d$   
 $p_x = 0$

35

# Inverse Kinematics

**Ball Joints**

$$\begin{aligned}
 \mathbf{p} &= \hat{\mathbf{r}}(\hat{\mathbf{r}} \cdot \mathbf{x}) \\
 &+ \sin(\|\mathbf{r}\|)(\hat{\mathbf{r}} \times \mathbf{x}) \\
 &- \cos(\|\mathbf{r}\|)(\hat{\mathbf{r}} \times (\hat{\mathbf{r}} \times \mathbf{x}))
 \end{aligned}$$

36

# Inverse Kinematics

## Ball Joints (moving axis)

$$d\mathbf{p} = [d\mathbf{r}] \cdot e^{[\mathbf{r}]} \cdot \mathbf{x} = [d\mathbf{r}] \cdot \mathbf{p} = -[\mathbf{p}] \cdot d\mathbf{r}$$

That is the Jacobian for this joint

$$[\mathbf{r}] = \begin{bmatrix} 0 & -r_3 & r_2 \\ r_3 & 0 & -r_1 \\ -r_2 & r_1 & 0 \end{bmatrix}$$

$$[\mathbf{r}] \cdot \mathbf{x} = \mathbf{r} \times \mathbf{x}$$

37

# Inverse Kinematics

## Ball Joints (fixed axis)

$$d\mathbf{p} = (d\theta)[\hat{\mathbf{r}}] \cdot \mathbf{x} = -[\mathbf{x}] \cdot \hat{\mathbf{r}} d\theta$$

That is the Jacobian for this joint

38

# Inverse Kinematics

- Many links / joints
  - Need a generic method for building Jacobian

39

# Inverse Kinematics

- Can't just concatenate individual matrices

The same diagram of the 3-link robotic arm is shown. Above it, the Jacobian matrix is given as  $\tilde{J} = [J_3 \ J_{2b} \ J_{2a} \ J_{1b}]$ , which is crossed out with a red line. To the right, the displacement vector  $d$  is shown as a column vector:  $d = \begin{bmatrix} d_3 \\ d_{2b} \\ d_{2a} \\ d_{1b} \end{bmatrix}$ . Below this, a red box contains the equation  $d\mathbf{p} \neq \tilde{J} \cdot d\mathbf{d}$ .

40

# Inverse Kinematics

## Transformation from body to world

$$X_{0 \leftarrow i} = \prod_{j=1}^i X_{(j-1) \leftarrow j} = X_{0 \leftarrow 1} \cdot X_{1 \leftarrow 2} \cdots$$

## Rotation from body to world

$$R_{0 \leftarrow i} = \prod_{j=1}^i R_{(j-1) \leftarrow j} = R_{0 \leftarrow 1} \cdot R_{1 \leftarrow 2} \cdots$$

41

# Inverse Kinematics

## Need to transform Jacobians to common coordinate system (WORLD)

42

# Inverse Kinematics

$$J = \begin{bmatrix} R_{0 \leftarrow 2b} \cdot J_3(\theta_3, \mathbf{p}_3) \\ R_{0 \leftarrow 2a} \cdot J_{2b}(\theta_{2b}, X_{2b \leftarrow 3} \cdot \mathbf{p}_3) \\ R_{0 \leftarrow 1} \cdot J_{2a}(\theta_{2a}, X_{2a \leftarrow 3} \cdot \mathbf{p}_3) \\ J_1(\theta_1, X_{1 \leftarrow 3} \cdot \mathbf{p}_3) \end{bmatrix}^T$$

$$\mathbf{d} = \begin{bmatrix} d_3 \\ d_{2b} \\ d_{2a} \\ d_{1b} \end{bmatrix}$$

*Note: Each row in the above should be transposed....*

$$d\mathbf{p} = J \cdot d\mathbf{d}$$
