

Your Slide Files

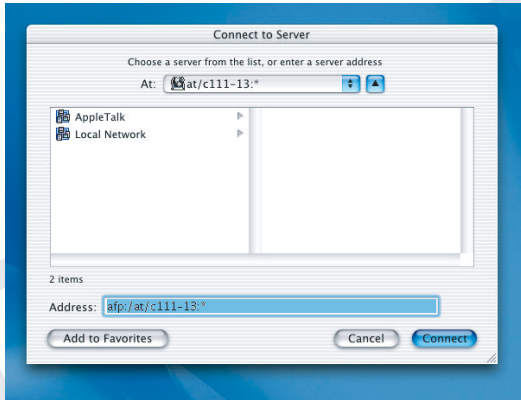

This tutorial assumes you have already scanned a slide on the Mac OS 9 machine (the computer labelled C111-13) and saved it to the shared folder "UserFiles." You *must* follow this process so that the files are saved under your own *personal, protected account*.

1 Make sure the computer C111-13 is turned on.
Go log on to one of the other Macintosh machines.

2 In the Finder, click on the menu
Go > Connect to Server.

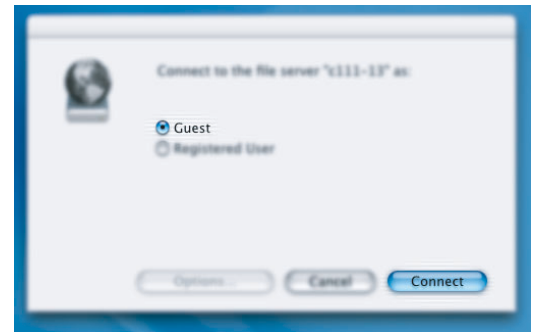

This window will pop up.

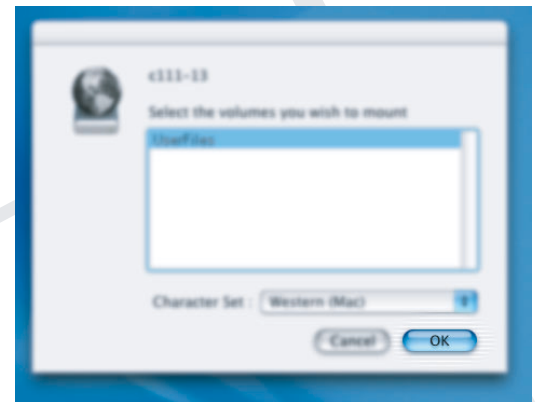

3 (1) Click on AppleTalk.
(2) Click on c111-13.
(3) Click the Connect button.

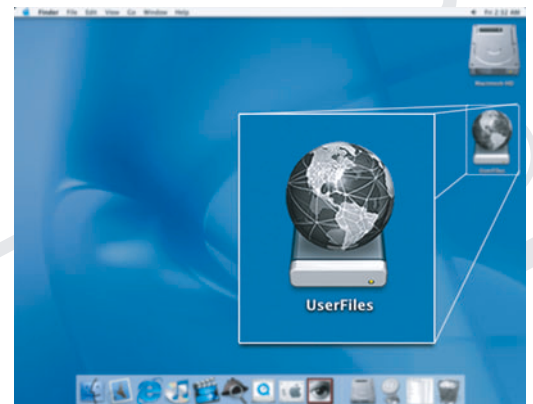

4 Click on the "Guest" radio button
and click the Connect button.

5 Click the OK button.

6 "UserFiles" will now show up on your desktop.
Double-click it.

The files you scanned in will be here. Copy these to your Home directory.
