Example: Grandparents

Which select statement evaluates to all grandparent, grandchild pairs?

1. `select a.grandparent, b.child from parents as a, parents as b
   where b.parent = a.child;`

2. `select a.parent, b.child from parents as a, parents as b
   where a.parent = b.child;`

3. `select a.parent, b.child from parents as a, parents as b
   where b.parent = a.child;`

4. `select a.grandparent, b.child from parents as a, parents as b
   where a.parent = b.child;`

5. None of the above
Joining Multiple Tables
Joining Multiple Tables

Multiple tables can be joined to yield all combinations of rows from each
Joining Multiple Tables

Multiple tables can be joined to yield all combinations of rows from each

```
create table grandparents as
    select a.parent as grandog, b.child as granpup
    from parents as a, parents as b
    where b.parent = a.child;
```
Joining Multiple Tables

Multiple tables can be joined to yield all combinations of rows from each.

```
create table grandparents as
  select a.parent as grandog, b.child as granpup
  from parents as a, parents as b
  where b.parent = a.child;
```

Select all grandparents with the same fur as their grandchildren.
Joining Multiple Tables

Multiple tables can be joined to yield all combinations of rows from each.

```sql
create table grandparents as
  select a.parent as grandog, b.child as granpup
  from parents as a, parents as b
  where b.parent = a.child;
```

Select all grandparents with the same fur as their grandchildren.

Which tables need to be joined together?
Joining Multiple Tables

Multiple tables can be joined to yield all combinations of rows from each

```
create table grandparents as
  select a.parent as grandog, b.child as granpup
  from parents as a, parents as b
  where b.parent = a.child;
```

Select all grandparents with the same fur as their grandchildren

```
select grandog from grandparents, dogs as c, dogs as d
  where grandog = c.name and
  granpup = d.name and
  c.fur = d.fur;
```

Which tables need to be joined together?
Numerical Expressions
Numerical Expressions

Expressions can contain function calls and arithmetic operators
Numerical Expressions

Expressions can contain function calls and arithmetic operators

```sql
select [columns] from [table] where [expression] order by [expression];
```
Numerical Expressions

Expressions can contain function calls and arithmetic operators

[expression] as [name], [expression] as [name], ...
```

```
select [columns] from [table] where [expression] order by [expression];
```
Numerical Expressions

Expressions can contain function calls and arithmetic operators

```
select [columns] from [table] where [expression] order by [expression];
```

Combine values: +, -, *, /, %, and, or
Numerical Expressions

Expressions can contain function calls and arithmetic operators

\[
\text{select } \text{[columns]} \text{ from } \text{[table]} \text{ where } \text{[expression]} \text{ order by } \text{[expression]};
\]

Combine values: +, −, *, /, %, and, or

Transform values: abs, round, not, −
Numerical Expressions

Expressions can contain function calls and arithmetic operators

```
select [columns] from [table] where [expression] order by [expression];
```

- Combine values: +, -, *, /, %, and, or
- Transform values: abs, round, not, -
- Compare values: <, <=, >, >=, <>, !=, =
Numerical Expressions

Expressions can contain function calls and arithmetic operators

```
select [columns] from [table] where [expression] order by [expression];
```

Combine values: +, -, *, /, %, and, or

Transform values: abs, round, not, -

Compare values: <, <=, >, >=, <>, !=, =

(Demo)
Example: Dog Triples
Fall 2014 Quiz Question

Write a SQL query that selects all possible combinations of three dogs with the same fur and lists them in order of increasing height.

```sql
create table parents as
select "abraham" as parent, "barack" as child union
select "abraham", "clinton" union
select "delano", "herbert" union
select "fillmore", "abraham" union
select "fillmore", "delano" union
select "fillmore", "grover" union
select "eisenhower", "fillmore" union
select "delano", "jackson";

create table dogs as
select "abraham" as name, "long" as fur, 26 as height union
select "barack", "short", 52 union
select "clinton", "long", 47 union
select "delano", "long", 46 union
select "eisenhower", "short", 35 union
select "fillmore", "curly", 32 union
select "grover", "short", 28 union
select "herbert", "curly", 31 union
select "jackson", "long", 43;
```

Expected output:

```
abraham|delano|clinton
grover|eisenhower|barack
```
String Expressions
String Expressions

String values can be combined to form longer strings
String Expressions

String values can be combined to form longer strings

```sql
sqlite> select "hello," || " world";
hello, world
```
