Announcements

- Please use git-bug for problems with submission, your code, the skeleton, or any of our software.

- **Tutors and lab assistants needed.** Consider volunteering to be a tutor or lab assistant for CS 10, self-paced courses, CS 61A, or CS 61B next semester.
Lecture #40: Course Summary

- Programming language: Java
- Program Analysis
- Categories of data structure: Java library structure
- Sequences
- Trees
- Searching
- Sorting
- Pseudo-random numbers
- Graphs
- Pragmatic implementation topics
Programming-Language Topics

• Object-based programming: organizing around data types
• Object-oriented programming:
  - Dynamic vs. static type
  - Inheritance
  - Idea of interface vs. implementation
• Generic programming (the \(<\cdots>\) stuff).
• Memory model: containers, pointers, arrays
• Numeric types
• Java syntax and semantics
• Scope and extent
• Standard idioms, patterns:
  - Objects used as functions (e.g., Comparator)
  - Partial implementations (e.g., AbstractList)
  - Iterators
  - Views (e.g., sublists)
Analysis and Algorithmic Techniques

- Asymptotic analysis
- $O(\cdot), o(\cdot), \Omega(\cdot), \Theta(\cdot)$ notations
- Worst case, average case.
- Amortized time
- Memoization and dynamic programming.
Major Categories of Data Structure

- Collection interface and its subtypes
- Map interface and its subtypes
- Generic skeleton implementations of collections, lists, maps (AbstractList, etc.)
- Complete concrete collection and map classes in Java library
Sequences

• Linking:
  - Single and double link manipulations
  - Sentinels
• Linking vs. arrays
• Stacks, queues, deques
• Circular buffering
• Trade-offs: costs of basic operations

Trees

• Uses of trees: search, representing hierarchical structures
• Basic operations: insertion, deletion
• Tree traversals
• Representing trees
• Game trees
Searching

- Search trees, range searching
- Multidimensional searches: quad trees.
- Hashing
- Priority queues and heaps
- Balanced trees
  - Rebalancing by rotation (red-black trees)
  - Balance by construction (B-trees)
  - Probabilistic balance (skip lists)
  - Tries
- Search times, trade-offs
Sorting

• Uses of sorting
• Insertion sort
• Selection sorting
• Merge sort
• Heap sort
• Quicksort and selection
• Distribution sort
• Radix sort
• Complexity of various algorithms, when to use them?
Random numbers

- Possible uses
- Idea of a pseudo-random sequence
- Linear congruential and additive generators
- Changing distributions:
  - Changing the range
  - Non-uniform distributions
- Shuffling, random selection
Graph structures

• Definition
• Uses: things represented by graphs
• Graph traversal: the generic traversal template
• Depth-first traversal, breadth-first traversal
• Topological sort
• Shortest paths
• Minimal spanning trees, union-find structures
• Memory management as a graph problem.
Debugging

- What debuggers can do
- How to use to pin down bugs
- Details of some debugger (Eclipse, gjdb, various Windows/Sun products, IntelliJ).
- Unit testing: what it means, how to use it.
- JUnit mechanics.
Version Control

- What’s it for?
- Basic concepts behind our particular system:
  - Working copy vs. repository copy
  - Committing changes
  - Updating and merging changes.
  - Tagging
A Case Study

- Presented Git version-control system as an example of a design using several ideas from this course.

- **Graph (DAG) and tree** structures represented with files as vertices and strings (file names), rather than machine addresses, as pointers.

- Use of hashing to create unique (or very, very likely to be unique) names: *probabilistic data structure*.

- Compression uses various kinds of map to facilitate conversion to and from compressed form, including *arrays, tries, and hash tables*.

- **Priority queue** in Huffman coding.
Assorted Side Trips

- Compression.
- Parallel processing.
- Storage management and garbage collection.
What's After the Lower Division?

- CSC100: Principles & Techniques of Data Science (Gonzalez, Adjikari)
- CS160: User Interface Design (Hartmann)
- CS161: Computer Security (Wagner, Popa)
- CS162: Operating Systems and System Programming (Kubiatowicz)
- [CS164: Programming Languages and Compilers (Hilfinger, Sen)]
- CS168: Intro. to the Internet: Architecture and Protocols (Ratnasamy)
- CS170: Efficient Algorithms and Intractable Problems (Chiesa, Nelson)
- [CS174: Combinatorics and Discrete Probability]
- CSW182: Deep Neural Networks (Canny)
- CS184: Graphics (Ng)
- CS186: Databases (Hug, Ball)
- CS188: Artificial Intelligence (Rao, Lambert)
What's After the Lower Division? (II)

- **CS189**: Machine Learning (Shewchuk)
- **CSC191**: Quantum Information Science and Technology
- **CS194**: Assorted Special Topics: Image Manipulation, Computer Vision and Computational Photography (Efros)
- **CS195**: Social Implications of Computer Technology (Hug, Ball)
- **CS152**: Computer Architecture (Asanovic)
- [**CS169**: Software Engineering]
- Numerous graduate courses: including advanced versions of 152, 160, 161, 170, 184, 186, 189; plus Cryptography, VLSI design and many special topics.
- And, of course, EE courses!
- Various opportunities for participating in research and independent study (199)
What's After the Lower Division? (III)

• But EE and CS are just two of over 150 subjects!
• Internships offer more specific skills and exposure to real problems.
• Above all, I think that CS is a creative activity that (to the true artists) ought to fun!
