## Exercises

1) Fill in the following table (implicit unsigned interpretation, since we hadn't done signs yet):

| Decimal | Binary | Hex |
| :--- | :--- | :--- |
| 31 | 0b00011111 | 0x1F |
| 27 | 0b0001 1011 | 0x1B |
| 17 | 0b0001 0001 | 0x11 |
| 127 | 0b01111111 | 0x7f |
| 202 | 0b1100 1010 | 0xCA |
| 255 | 0b11111111 | 0xFF |

2) The Koozbanian language has 768 distinct symbols. What is the minimum number of bits needed to represent every symbol?
Ten! $2^{9}=512$ isn't enough, so we need $2^{10}=1024$.
3) Represent the following values in IEC format:
$2^{18}$
256 Kibi
$2^{3} \quad 8$
$2^{43}$
8 Tebi
$2^{20}$
1 Mebi
4) Your awesome new computer has 1.5 TiB of byte-addressed memory ( 1.5 Ti possible addresses). How many bits are needed to represent every address?
With 41 bits we can represent $2^{41}=2$ TebiThings, which is necessary to represent so many addresses.
