Course Mechanics

EE129 is presented like a series of inter-related research seminars devoted to a common theme. While the course has no pre-requisites, since all unfamiliar backgrounds (mathematics, biology, chemistry etc.) will be presented, each lecture will depend on topics covered in preceding lectures. To achieve full benefits, it is essential to attend the lectures.
In view of the strong research orientation of EE129, there are no homeworks and no exams. Instead, there will be a midterm project and a final project.

Grading: midterm project – 40%
        final project         – 60%

Final Project report date:
    Monday, Dec. 6, 9:30 AM
    No extension possible.

Final Grade: A, B, or F

No midterm or Final project report, or 4 absences → F

There will be 4 randomly scheduled roll calls.
