

UC Berkeley

EE C245 - ME C218 Introduction to MEMS Design Fall 2011

Prof. Clark T.-C. Nguyen

Dept. of Electrical Engineering & Computer Sciences
University of California at Berkeley
Berkeley, CA 94720

Lecture Module 2: Benefits of Scaling

EE C245: Introduction to MEMS Design LecM 2 C. Nguyen 8/20/09 1

UC Berkeley

Micro Gas Analyzers (MGA)

EE C245: Introduction to MEMS Design LecM 2 C. Nguyen 8/20/09 2

UC Berkeley

Micro Gas Analyzers

- Objective:** enable remote detection of chemical agents via tiny, ultra-low power, fast, chip-scale gas analyzers that greatly reduce the incidence of false positives
- Approach:** use micromachining technologies to implement separation-based analyzers (e.g., gas chromatographs, mass spectrometers) at the micro-scale to enhance gas selectivity

Conventional Sensor

Problem: polymer has finite sensitivity to both A & B

Separation Analyzer

Result: species A & B now separated ⇒ can identify and analyze individually

EE C245: Introduction to MEMS Design LecM 2 C. Nguyen 8/20/09 3

UC Berkeley

Advantages of Miniaturization

Portable Gas Chromatograph

Chip-Scale Gas Chromatograph

Reduction Factors

Size	40,500 cm ³	20,000X	Size	2 cm ³
Sensitivity	1 ppb	1,000X	Sensitivity	1 ppt
Analysis Time	15 min.	225X	Analysis Time	4 sec
Energy Per Analysis	10,000 J	10,000X	Energy Per Analysis	1 J

EE C245: Introduction to MEMS Design LecM 2 C. Nguyen 8/20/09 4

Basic Approach: Separation Analyzer

UC Berkeley

Three Analytes → Input Gas Mixture → Pre-Concentrator → Separated Analytes → Separator → Detector → Electronic Processor → Pump

Miniaturization

Tiny Dimensions

- fast time constants
- 10,000X gain factor via multi-staging
- enhanced sensitivity
- lower power

Tiny Dimensions

- faster separation
- lower power

EE C245: LecM 2 C. Nguyen 8/20/09 5

Scaling Leads to Faster Separation

UC Berkeley

- Example:** gas chromatograph separation column
 - unique analyte interactions with the column walls
 - different analyte velocities
 - result:** separation after a finite distance

240 μm, 150 μm

Wide Channel → Miniaturize → Thin Channel

Carrier Gas (Mobile Phase) → Stationary Phase

Peak Broadens → Peak Stays Thin → Less Separation Needed to Resolve

Conc. vs. x

EE C245: Introduction to MEMS Design LecM 2 C. Nguyen 8/20/09 6

Scaling Leads to Faster Separation

UC Berkeley

- Example:** gas chromatograph separation column
 - unique analyte interactions with the column walls
 - different analyte velocities
 - result:** separation after a finite distance

240 μm, 150 μm

Wide Channel → Miniaturize → Thin Channel

Carrier Gas (Mobile Phase) → Stationary Phase

Column Width ↓ → Surface-to-Volume Ratio ↑ → Peak Spreading ↓ → Separation Distance ↓

- Result of Scaling:** shorter column length; faster analysis time

EE C245: Introduction to MEMS Design LecM 2 C. Nguyen 8/20/09 7

Gas Chromatography in Less Than 4s!

UC Berkeley

Design/Measurement Data:

- 0.75m x 100μ column
- 0.1μ DB-5 stationary phase
- Heart-cut 275 msec peak injection
- Temperature: ~30 deg C/sec
- H₂ carrier: 35-39 psi at 1 psi/sec

Sandia's micro-GC Column

Relative Intensity vs. Elution time [s]

Peak capacity >40, in 4 sec

Green = Analyte, Blue = Interferent

Peaks: Solvent, 3-methylhexane, Toluene, DMMP, DEMP, DIMP, 1,6-dichlorohexane, n-dodecane, 1-decanol

EE C245: Introduction to MEMS Design LecM 2 C. Nguyen 8/20/09 8

Basic Approach: Separation Analyzer

UC Berkeley

Three Analytes → Input Gas Mixture → Pre-Concentrator → Separated Analytes → Separator → Detector → Electronic Processor → Pump

Miniaturization

- Tiny Dimensions**
 - fast time constants
 - 10,000X gain factor via multi-staging
 - enhanced sensitivity
 - lower power
- Tiny Dimensions**
 - faster separation
 - lower power
- Tiny Dimensions**
 - higher sensitivity
 - faster refresh rate
 - lower power
 - arrays for specificity

EE C245: Introduction to MEMS Design LecM 2 C. Nguyen

Zeptogram Mass Sensors

UC Berkeley

Nanomechanical Resonator → Shutter → Au → Nozzle → Nanomechanical Resonator

[Roukes, Cal Tech]

Measurement noise level indicates ~7 zg of resolution

100 zg Au atom clumps resolved!

Frequency Shift (Hz) vs Time (sec)

Frequency Shift (Hz) vs Mass (zeptograms)

- ▲ 133 MHz
- 190 MHz
- >1 Hz/zg

EE C245: Introduction to MEMS Design LecM 2 C. Nguyen

Gas Analyzer Technology Progression

UC Berkeley

MSD GC-FPD Dynatherm

Agilent 6852A
Vol: 60,000 cm³
Power: 20 W
Energy/Analysis: 18 kJ
Analysis Time: 15 min.

LLNL
Vol: 40,500 cm³
Power: 11.5 W
Energy/Analysis: 10 kJ
Analysis Time: 15 min.

Sandia uChem Lab
Vol: 1,050 cm³
Power: 4.5 W
Energy/Analysis: 540 J
Analysis Time: 2 min.

Gas Chromatograph/Mass Spectrometer (GC/MS) is a "gold standard" in chemical gas detection with excellent immunity to false alarms

Problems: too big, too slow, power hungry

Solution: use MEMS technology to miniaturize the GC/MS, which in turn makes it faster and more energy efficient

MGA Objective
Vol: 2 cm³
Power: <200 mW
Energy/Analysis: 1 J
Analysis Time: 4 s

- small enough for projectile delivery
- 1 ppt det. limit
- very fast
- battery operable

EE C245: Introduction to MEMS Design LecM 2 C. Nguyen

Example: Micromechanical Accelerometer

UC Berkeley

The MEMS Advantage:

- >30X size reduction
- accelerometer mechanism
- allows integration

Tiny mass means small output ⇒ need integrated transistor circuits to compensate

Basic Operation Principle

$x \propto F_i = ma$

Displacement
Spring
Inertial Force
Proof Mass
Acceleration

400 μm

Analog Devices ADXL 78

EE C245: Introduction to MEMS Design LecM 2 C. Nguyen

 **Messages Going Forward ...**

- MEMS are micro-scale or smaller devices/systems that operate mainly via a mechanical or electromechanical means
- MEMS \Rightarrow NEMS offer the same scaling advantages that IC technology offers (e.g., speed, low power, complexity, cost), but they do so for domains beyond electronics:

Size \downarrow  resonant frequency \uparrow (faster speed)
actuation force \downarrow (lower power)
mechanical elements \uparrow (higher complexity)
integration level \uparrow (lower cost)

- Micro ... nano ... *it's all good*
- Just as important: MEMS or NEMS have brought together people from diverse disciplines \Rightarrow this is the key to growth!
- What's next? \Rightarrow Nano-nuclear fusion? Chip-scale atomic sensors?

... **limitless possibilities** ...
