

UC Berkeley

EE C247B - ME C218 Introduction to MEMS Design Spring 2019

Prof. Clark T.-C. Nguyen

Dept. of Electrical Engineering & Computer Sciences
University of California at Berkeley
Berkeley, CA 94720

Lecture Module 7: Mechanics of Materials

EE_C245: Introduction to MEMS Design LecM 7 C. Nguyen 9/28/07 1

UC Berkeley

Outline

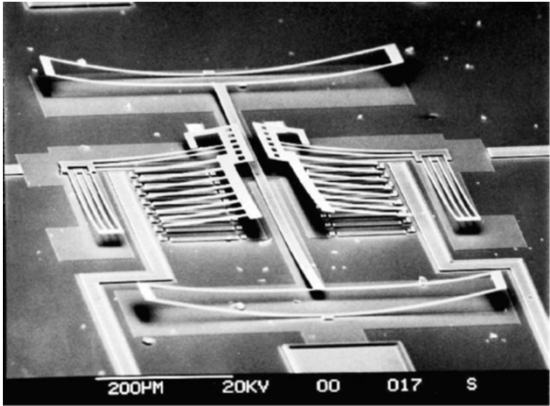

- Reading: Senturia, Chpt. 8
- Lecture Topics:
 - ↗ Stress, strain, etc., for isotropic materials
 - ↗ Thin films: thermal stress, residual stress, and stress gradients
 - ↗ Internal dissipation
 - ↗ MEMS material properties and performance metrics

EE_C245: Introduction to MEMS Design LecM 7 C. Nguyen 9/28/07 2

UC Berkeley

Vertical Stress Gradients

- Variation of residual stress in the direction of film growth
- Can warp released structures in z-direction

EE_C245: Introduction to MEMS Design LecM 7 C. Nguyen 9/28/07 3

UC Berkeley

Elasticity

EE_C245: Introduction to MEMS Design LecM 7 C. Nguyen 9/28/07 4

Normal Stress (1D)

UC Berkeley

If the force acts normal to a surface, then the stress is called a **normal stress**

Force assumed uniform over the whole area A

$$\text{Stress} = \left\{ \begin{array}{l} \text{Force per} \\ \text{unit area} \end{array} \right\} = \sigma = \frac{F}{A} \quad [\text{N/m}^2 = \text{Pa}]$$

standard mks unit

⇒ Microscopic Definition: force per unit area acting on the surface of a differential volume element of a solid body

⇒ Note: assume stress acts uniformly across the entire surface of the element, not at just a point

Differential volume element

EE C245: Introduction to MEMS Design LecM 7 C. Nguyen 9/28/07 5

Strain (1D)

UC Berkeley

Sometimes a unit called the "microstrain" is used, where $1 \mu\epsilon = \frac{\Delta L}{L}$ of 1 part in 10^6

$$\text{Strain} = \left\{ \begin{array}{l} \text{Fractional Change} \\ \text{in Length} \end{array} \right\} = \epsilon = \frac{L' - L}{L} = \frac{\Delta L}{L} \quad [\text{unitless}]$$

In the elastic regime (i.e., for "small" stresses at "low" temperatures), strain is found to be proportional to stress

σ ← stress For solids: MPa → GPa σ = εE → $\epsilon = \frac{\sigma}{E}$ [unitless]

ε ← strain slope = E = Young's modulus of elasticity

Thus, the units of E are the same as σ → Pa
