

## The Beauty and Joy of Computing

Lecture #10  
Concurrency

UC Berkeley EECS  
Sr Lecturer SOE  
Dan Garcia

**"KOOMEY'S LAW" – EFFICIENCY 2X EVERY 18 MO**

Prof Jonathan Koomey looked at 6 decades of data and found that energy efficiency of computers doubles roughly every 18 months. This is even more relevant as battery-powered devices become more popular. Restated, it says that for a fixed computing load, the amount of battery you need drops by half every 18 months. This was true before transistors!

## Concurrency: A Definition

Concurrency: A property of computer systems in which several computations are executing simultaneously, and potentially interacting with each other.

UC Berkeley "The Beauty and Joy of Computing" : Concurrency (2)

## Concurrency is Everywhere!

Examples:

- Mouse cursor movement while Snap! calculates.
- Screen clock advances while typing in a text.
- Busy cursor spins while browser connects to server, waiting for response
- Walking while chewing gum

UC Berkeley "The Beauty and Joy of Computing" : Concurrency (3)

## Concurrency & Parallelism

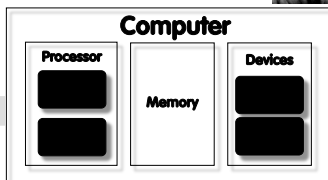

Intra-computer	Inter-computer
<ul style="list-style-type: none"> <li>▪ Today's lecture</li> <li>▪ Multiple computing "helpers" are cores <u>within one machine</u></li> <li>▪ Aka "multi-core" <ul style="list-style-type: none"> <li>▫ Although GPU parallism is also "intra-computer"</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>▪ Future lecture</li> <li>▪ Multiple computing "helpers" are <u>different machines</u></li> <li>▪ Aka "distributed computing" <ul style="list-style-type: none"> <li>▫ Grid &amp; cluster computing</li> </ul> </li> </ul>

UC Berkeley "The Beauty and Joy of Computing" : Concurrency (4)

## Anatomy: 5 components of any Computer

John von Neumann invented this architecture

**Computer**

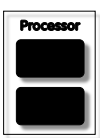

- Processor
- Memory
- Devices

a) Control  
b) Datapath  
c) Memory  
d) Input  
e) Output

What causes the most headaches for SW and HW designers with multi-core computing?

UC Berkeley "The Beauty and Joy of Computing" : Concurrency (5)

## But what is INSIDE a Processor?

UC Berkeley "The Beauty and Joy of Computing" : Concurrency (6)

## But what is INSIDE a Processor?

- Primarily Crystalline Silicon
- 1 mm – 25 mm on a side
- 2009 “feature size” (aka process) ~ 45 nm =  $45 \times 10^{-9}$  m (then 32, 22, and 16 [by yr 2013])
- 100 - 1000M transistors
- 3 - 10 conductive layers
- “CMOS” (complementary metal oxide semiconductor) - most common
- Package provides:
  - spreading of chip-level signal paths to board-level
  - heat dissipation.
- Ceramic or plastic with gold wires.

UC Berkeley “The Beauty and Joy of Computing” : Concurrency (7)

## en.wikipedia.org/wiki/Moore's\_Law

### Moore's Law

Predicts: 2X Transistors / chip every 2 years

What is this “curve”?

- Constant
- Linear
- Quadratic
- Cubic
- Exponential

Gordon Moore  
Intel Co-founder  
B.S. Cal 1950!

UC Berkeley “The Beauty and Joy of Computing” : Concurrency (8)

## Background: Threads

- A **Thread** stands for “thread of execution”, is a single stream of instructions
  - A program / process can split, or fork itself into separate threads, which can (in theory) execute simultaneously.
  - An easy way to describe/think about parallelism
- A single CPU can execute many threads by **Time Division Multiplexing**
- **Multithreading** is running multiple threads through the same hardware

UC Berkeley “The Beauty and Joy of Computing” : Concurrency (12)

en.wikipedia.org/wiki/Amdahl's\_law

## Speedup Issues : Amdahl's Law

- Applications can almost **never** be completely parallelized; some serial code remains

Time  
Parallel portion  
Serial portion

Number of Cores

- s is serial fraction of program, P is # of cores (was processors)
- Amdahl's law:**  
Speedup(P) = Time(1) / Time(P)  
 $\leq 1 / (s + (1-s) / P)$ , and as  $P \rightarrow \infty$   
 $\leq 1 / s$
- Even if the parallel portion of your application speeds up perfectly, your performance may be limited by the sequential portion

UC Berkeley "The Beauty and Joy of Computing" : Concurrency (13)

en.wikipedia.org/wiki/Amdahl's\_law

## Speedup Issues : Overhead

- Even assuming no sequential portion, there's...**
  - Time to think how to divide the problem up
  - Time to hand out small "work units" to workers
  - All workers may not work equally fast
  - Some workers may fail
  - There may be contention for shared resources
  - Workers could overwriting each others' answers
  - You may have to wait until the last worker returns to proceed (the slowest / weakest link problem)
  - There's time to put the data back together in a way that looks as if it were done by one

UC Berkeley "The Beauty and Joy of Computing" : Concurrency (14)

en.wikipedia.org/wiki/Amdahl's\_law

## Life in a multi-core world...

- This "sea change" to multi-core parallelism means that the computing community has to rethink:**
  - Languages
  - Architectures
  - Algorithms
  - Data Structures
  - All of the above

UC Berkeley "The Beauty and Joy of Computing" : Concurrency (15)

en.wikipedia.org/wiki/Concurrent\_computing

## But parallel programming is hard!

- What if two people were calling withdraw at the same time?**
  - E.g., balance=100 and two withdraw 75 each
  - Can anyone see what the problem *could* be?
  - This is a race condition
- In most languages, this is a problem.**
  - In Scratch, the system doesn't let two of these run at once.

UC Berkeley "The Beauty and Joy of Computing" : Concurrency (16)

en.wikipedia.org/wiki/Deadlock

## Another concurrency problem ... deadlock!

- Two people need to draw a graph but there is only one pencil and one ruler.**
  - One grabs the pencil
  - One grabs the ruler
  - Neither release what they hold, waiting for the other to release
- Livelock also possible**
  - Movement, no progress

UC Berkeley "The Beauty and Joy of Computing" : Concurrency (17)

en.wikipedia.org/wiki/Concurrent\_computing

## Summary

- "Sea change" of computing because of inability to cool CPUs means we're now in multi-core world
- This brave new world offers lots of potential for innovation by computing professionals, but challenges persist

UC Berkeley "The Beauty and Joy of Computing" : Concurrency (18)
