```

Return

## Return Statements

---

## Return Statements

---

A return statement completes the evaluation of a call expression and provides its value

## Return Statements

---

A return statement completes the evaluation of a call expression and provides its value  $f(x)$  for user-defined function  $f$ : switch to a new environment; execute  $f$ 's body

## Return Statements

---

A return statement completes the evaluation of a call expression and provides its value

`f(x)` for user-defined function `f`: switch to a new environment; execute `f`'s body

**return** statement within `f`: switch back to the previous environment; `f(x)` now has a value

## Return Statements

---

A return statement completes the evaluation of a call expression and provides its value

`f(x)` for user-defined function `f`: switch to a new environment; execute `f`'s body

`return` statement within `f`: switch back to the previous environment; `f(x)` now has a value

Only one return statement is ever executed while executing the body of a function

## Return Statements

---

A return statement completes the evaluation of a call expression and provides its value

`f(x)` for user-defined function `f`: switch to a new environment; execute `f`'s body

`return` statement within `f`: switch back to the previous environment; `f(x)` now has a value

Only one return statement is ever executed while executing the body of a function

```
def end(n, d):  
    """Print the final digits of N in reverse order until D is found.  
  
    >>> end(34567, 5)  
    7  
    6  
    5  
    """
```
