## CS 184 - Splines Worksheet

## Daniel Ritchie

1. Below are control points for two connected segments of a cubic Bezier curve. Point 5 is missing.

- Place Point 5 so as to join the two segments with $C^{1}$ continuity.
- Draw the resulting curve. Show the results of DeCasteljau evaluation at the the midpoints of the two segments.

4
2. Fill in the following table of properties for three types of curves that we've studied in this class.

| Curve Type | Interpolation? | Local Support? | Convex Hull? | Continuity? |
| :---: | :--- | :--- | :--- | :--- |
| Bezier |  |  |  |  |
| Natural |  |  |  |  |
|  |  |  |  |  |
| B-Splines |  |  |  |  |
|  |  |  |  |  |

11. There are 8 functions plotted below. Neatly cross out the ones that are not part of the cubic B-spline basis set. Number the remaining functions to show the order that they go together to form the B-spline "hump" function.

For those that are NOT B-spline basis functions write a single short sentence that explains why they could not be. Your reason should be simple. Note: "It isn't what I have in my notes," "it won't fit," "it doesn't solve the equations," or other generic answers will not be accepted.
