

Self Reflection Reflection

CS 375: Teaching Techniques for Computer Science, Fall 2014

Questions to consider.

- Many of you mentioned wanting to spend time before your sections to prepare. How long did you spend beforehand? How much more time would you have liked to spend?
- What are some ways to increase student participation? What are some ways to encourage more group work?
- What are some ways to feel more confident? What are some ways to feel more enthusiastic?
- How often should you be answering a question with a question? What are the pros and cons of doing so?
- What are some ways to gauge student understanding during a section?
- If a few students (one or more) are dominating the discussion, how can you address this?
