1. Copy Machine

- (a) Peter wants to print this week's discussion handouts for all the students in CS 61A. However, both printers are broken! The first printer only prints multiples of n pages, and the second printer only prints multiples of m pages. Help Peter figure out whether or not it's possible to print exactly $total$ number of handouts!

```
def has_sum(total, n, m):
    """
    >>> has_sum(1, 3, 5)
    False
    >>> has_sum(5, 3, 5) # 0 * 3 + 1 * 5 = 5
    True
    >>> has_sum(11, 3, 5) # 2 * 3 + 1 * 5 = 11
    True
    """

    if _____:

        return _____

    elif _____:

        return _____

    return _____
```

- (b) The next day, the printers break down even more! Each time they are used, the first printer prints a random x copies $50 \leq x \leq 60$, and the second printer prints a random y copies $130 \leq y \leq 140$. Peter also relaxes his expectations: he's satisfied as long as there's at least $lower$ copies so there are enough for everyone, but no more than $upper$ copies to prevent waste.

```
def sum_range(lower, upper):
    """
    >>> sum_range(45, 60) # Printer 1 prints within this range
    True
    >>> sum_range(40, 55) # Printer 1 can print a number 56-60
    False
    >>> sum_range(170, 201) # Printer 1 + 2 will print between 180 and 200 copies total
    True
    """

    def copies(pmin, pmax):

        if _____:

            return _____

        elif _____:

            return _____

        return _____

    return copies(0, 0)
```
