## Hog Contest Rules

---

- Up to two people submit one entry;  
Max of one entry per person
- Your score is the number of entries  
against which you win more than  
50.00001% of the time
- Strategies are time-limited
- All strategies must be deterministic,  
pure functions of the players' scores
- Winning entries will receive a paltry  
amount of extra credit
- The real prize: honor and glory
- See website for detailed rules

### **Fall 2011 Winners**

Kaylee Mann  
Yan Duan & Ziming Li  
Brian Prike & Zhenghao Qian  
Parker Schuh & Robert Chatham

### **Fall 2012 Winners**

Chenyang Yuan  
Joseph Hui

### **Fall 2013 Winners**

Paul Bramsen  
Sam Kumar & Kangsik Lee  
Kevin Chen

### **Fall 2014 Winners**

Alan Tong & Elaine Zhao  
Zhenyang Zhang  
Adam Robert Villaflor & Joany Gao  
Zhen Qin & Dian Chen  
Zizheng Tai & Yihe Li

## Hog Contest Winners

---

### **Spring 2015 Winners**

Sinho Chewi & Alexander Nguyen Tran  
Zhaoxi Li  
Stella Tao and Yao Ge

### **Fall 2015 Winners**

Micah Carroll & Vasilis Oikonomou  
Matthew Wu  
Anthony Yeung and Alexander Dai

### **Spring 2016 Winners**

Michael McDonald and Tianrui Chen  
Andrei Kassiantchouk  
Benjamin Krieges

### **Fall 2016 Winners**

Will Gan & Robert Quitt  
Eric Sheng & Sachin Kesiraju  
Mingwei Samuel  
Simon Zhuang & Vaikunth Balaji  
Fanyu Meng & Zekai Fan

### **Spring 2017 Winners**

Cindy Jin and Sunjoon Lee  
Anny Patino and Christian Vasquez  
Asana Choudhury and Jenna Wen  
Michelle Lee and Nicholas Chew

### **Fall 2017 Winners**

Alex Yu and Tanmay Khattar  
James Li  
Justin Yokota

### **Spring 2018 Winners**

Eric James Michaud  
Ziyu Dong  
Xuhui Zhou

### **Fall 2018 Winners**

Rahul Arya  
Jonathan Bodine  
Sumer Kohli and Neelesh Ramachandran

## Hog Contest Winners

---

### **Fall 2019 Winners**

Jet Situ and Lucas Schaberg  
Anthony Han and Hongyi Huang  
Arthur Pan and Qingyuan Liu

### **Spring 2020 Winners**

Andy Dong  
Theodor Sion and Anish Kar  
Shaun Diem-Lane

### **Fall 2020 Winners**

Timothy Guo  
Shomini Sen  
Samuel Berkun  
Mitchell Zhen  
Lucas Clark  
Dominic de Bettencourt  
Allen Gu  
Alec Li  
Aaron Janse

### **Fall 2021 Winners**

Your name could be here FOREVER!  

Review

## What Would Python Display?

The print function returns None. It also displays its arguments (separated by spaces) when it is called.

```
from operator import add, mul
def square(x):
    return mul(x, x)
```

A function that takes any argument and returns a function that returns that arg

```
def delay(arg):
    print('delayed')
    def g():
        return arg
    return g
```

Names in nested def statements can refer to their enclosing scope

| <u>This expression</u>     | <u>Evaluates to</u> | <u>Interactive Output</u> |
|----------------------------|---------------------|---------------------------|
| 5                          | 5                   | 5                         |
| print(5)                   | None                | 5                         |
| print( <u>print(5)</u> )   | None                | 5<br>None                 |
| <u>delay(delay)()(6)()</u> | 6                   | delayed<br>delayed<br>6   |
| print(delay(print)()(4))   | None                | delayed<br>4<br>None      |

## What Would Python Print?

The print function returns None. It also displays its arguments (separated by spaces) when it is called.

```
from operator import add, mul
def square(x):
    return mul(x, x)
```

A function that always returns the identity function

```
def pirate(arggg):
    print('matey')
    def plunder(arggg):
        return arggg
    return plunder
```

| <u>This expression</u>  | <u>Evaluates to</u> | <u>Interactive Output</u> |
|---|---------------------|---------------------------|
| $\text{add}(\underbrace{\text{pirate}(3)}_{\text{func square}(x)}}(\text{square})(4), 1)$   | 17                  | Matey<br>17               |
| $\underbrace{\text{pirate}(\text{pirate}(\text{pirate}))}_{\text{Identity function}}(5)(7)$ | Error               | Matey<br>Matey<br>Error   |

A name evaluates to the value bound to that name in the earliest frame of the current environment in which that name is found.

```
def horse(mask):  
    horse = mask  
    def mask(horse):  
        return horse  
    return horse(mask)
```

```
mask = lambda horse: horse(2)
```

```
horse(mask)
```

func horse(mask) [parent=Global]

func λ(horse) [parent=Global]

func mask(horse) [parent=f1]

# Implementing Functions

## Implementing a Function

```
def remove(n, digit):
    """Return all digits of non-negative N
    that are not equal to digit, for some
    digit less than 10.

    >>> remove(231, 3)
    21
    >>> remove(243132, 2)
    4313
    """
    kept, digits = 0, 0
    while n > 0:
        n, last = n // 10, n % 10
        if last != digit:
            kept = 10*kept + last*10**digits
            digits = digits + 1
    return kept
```
