                                             union
 select "t-rex"
                               , 12000;
```

kind	legs	weight
dog	4	20
cat	4	10
ferret	4	10
parrot	2	6
penguin	2	10
t-rex	2	12000

An aggregate function also selects some row in the table to supply the values of columns that are not aggregated. In the case of max or min, this row is that of the max or min value. Otherwise, it is arbitrary.

animals:

kind	legs	weight
dog	4	20
cat	4	10
ferret	4	10
parrot	2	6
penguin	2	10
t-rex	2	12000

An aggregate function also selects some row in the table to supply the values of columns that are not aggregated. In the case of max or min, this row is that of the max or min value. Otherwise, it is arbitrary.

```
select max(weight), kind from animals;
```

animals:

kind	legs	weight
dog	4	20
cat	4	10
ferret	4	10
parrot	2	6
penguin	2	10
t-rex	2	12000

An aggregate function also selects some row in the table to supply the values of columns that are not aggregated. In the case of max or min, this row is that of the max or min value. Otherwise, it is arbitrary.

```
select max(weight), kind from animals;
select min(kind), kind from animals;
```

animals:

kind	legs	weight

penguin	2	10
t-rex	2	12000

Discussion Question

What are all the kinds of animals that have the maximal number of legs?

Brouping Rows	

Rows in a table can be grouped, and aggregation is performed on each group

Rows in a table can be grouped, and aggregation is performed on each group

```
[expression] as [name], [expression] as [name], ...
```

select [columns] from [table] group by [expression] having [expression];

Rows in a table can be grouped, and aggregation is performed on each group

```
[expression] as [name], [expression] as [name], ...
```

select [columns] from [table] group by [expression] having [expression];

The number of groups is the number of unique values of an expression

Rows in a table can be grouped, and aggregation is performed on each group

```
[expression] as [name], [expression] as [name], ...
```

select [columns] from [table] group by [expression] having [expression];

The number of groups is the number of unique values of an expression

animals:

kind	legs	weight
dog	4	20
cat	4	10
ferret	4	10
parrot	2	6
penguin	2	10
t-rex	2	12000

Rows in a table can be grouped, and aggregation is performed on each group

```
[expression] as [name], [expression] as [name], ...
```

select [columns] from [table] group by [expression] having [expression];

The number of groups is the number of unique values of an expression select legs, max(weight) from animals group by legs;

kind	legs	weight
dog	4	20
cat	4	10
ferret	4	10
parrot	2	6
penguin	2	10
t-rex	2	12000

Rows in a table can be grouped, and aggregation is performed on each group

```
[expression] as [name], [expression] as [name], ...
```

select [columns] from [table] group by [expression] having [expression];

The number of groups is the number of unique values of an expression select legs, max(weight) from animals group by legs;

kind	legs	weight
dog	4	20
cat	4	10
ferret	4	10
parrot	2	6
penguin	2	10
t-rex	2	12000

Rows in a table can be grouped, and aggregation is performed on each group

```
[expression] as [name], [expression] as [name], ...
```

select [columns] from [table] group by [expression] having [expression];

The number of groups is the number of unique values of an expression select legs, max(weight) from animals group by legs;

	kind	legs	weight
1	dog	4	20
legs=4	cat	4	10
	ferret	4	10
	parrot	2	6
	penguin	2	10
	t-rex	2	12000

Rows in a table can be grouped, and aggregation is performed on each group

```
[expression] as [name], [expression] as [name], ...
```

select [columns] from [table] group by [expression] having [expression];

The number of groups is the number of unique values of an expression select legs, max(weight) from animals group by legs;

	kind	legs	weight
<u>'</u>	dog	4	20
legs=4	cat	4	10
	ferret	4	10
1	parrot	2	6
	penguin	2	10
	t-rex	2	12000

Grouping Rows

Rows in a table can be grouped, and aggregation is performed on each group

```
[expression] as [name], [expression] as [name], ...
```

select [columns] from [table] group by [expression] having [expression];

The number of groups is the number of unique values of an expression select legs, max(weight) from animals group by legs;

	kind	legs	weight
1	dog	4	20
legs=4	cat	4	10
	ferret	4	10
legs=2	parrot	2	6
	penguin	2	10
	t-rex	2	12000

Grouping Rows

Rows in a table can be grouped, and aggregation is performed on each group

```
[expression] as [name], [expression] as [name], ...
```

select [columns] from [table] group by [expression] having [expression];

The number of groups is the number of unique values of an expression select legs, max(weight) from animals group by legs;

			kind	legs	weight
legs	max(weight)	1 :	dog	4	20
		legs=4	cat	4	10
4	20		ferret	4	10
2	12000	* .	parrot	2	6
		legs=2	penguin	2	10
			t-rex	2	12000

Grouping Rows

Rows in a table can be grouped, and aggregation is performed on each group

```
[expression] as [name], [expression] as [name], ...
```

select [columns] from [table] group by [expression] having [expression];

The number of groups is the number of unique values of an expression select legs, max(weight) from animals group by legs;

			kind	legs	weight
legs	max(weight)	1	dog	4	20
legs		legs=4	cat	4	10
4	20		ferret	4	10
2	12000	」 ▼.	parrot	2	6
		legs=2	penguin	2	10
		(Demo)	t-rex	2	12000
