

# CS61A Summer 2010: Homework Submission Instructions

George Wang

June 22, 2010

**Note:** Naming Examples are for homework 1; you should change the numbering in the names for different homeworks.

1. To facilitate the process, we ask that you follow these directions. Put your answers a single file. If your login is `cs61a-dq`, name the file `dq.hw1.scm` for homework 1, etc. In this file, include only the definitions of the procedures you are asked to write. Name the procedures *exactly* as stated in the homework handouts and include exactly as many arguments as stated in the handout. (you can name the arguments whatever you want) In other words, if we try to load this file into Scheme, it should not return errors.

If you need to write us something because you were unable to complete a problem, or needed to remember something, please leave a comment using the comment character semicolon ;

2. If you collaborated with other students on the homework, please include their names and logins in a `LOGIN.hw1` file, one name and login per line. This file should be of the form:

```
Steven Tang, cs61a-ta  
Eric Tzeng, cs61a-te
```

This is just an example, and you do not need to note help provided by the course staff. This ensures that your friends get the recognition they deserve and immunizes you from plagiarism accusations, so please do it!

3. Make a new directory in your instructional account called `hw1`, and put the two files in it.
4. Go into the directory and use the command `submit hw1`. When prompted, include `dq.hw1.scm` and your `LOGIN.hw1` file and submit.

## FAQ:

- **Q:** Do I have to check to see if the inputs to my procedures are correct?  
**A:** No. Assume all inputs are correct. For example, if the problem description states that the input to some procedure is a number, you don't have to add a check to make sure that it is indeed a number and signal error otherwise.
- **Q:** Do I have to do my work on the instructional accounts?  
**A:** No, but you have to submit from your instructional account. You can work on Windows at home and upload the file to your instructional account later.

- **Q:** How do I check my grades?  
**A:** On your instructional account, use the command `glookup`
- **Q:** What will happen if I submit multiple times?  
**A:** We will only grade the last submission that is before the deadline. If you want us to grade a different submission than the last one, please email your reader.
- **Q:** If you give us a template file, are we required to use it?  
**A:** No, but it will certainly make your life much easier.
- **Q:** Do I need to turn in anything on paper?  
**A:** No.
- **Q:** Are the Extra for Expert sections required? Do they give extra credit?  
**A:** No and No. They are quite difficult and if you can do them, you can reward yourself with the knowledge that you have a strong talent for computer science.
- **Q:** How do I make sure my homework is submitted correctly?  
**A:** On your instructional account, use the command `glookup -t`, it will show you a log of all the submissions you've made. A submission is successful if and only if it is logged.
