

Public-Service Announcement II

Senator Chow is looking for applicants to intern in her office. Interns could choose from a variety of commitments (UC Berkeley Club Recruitment Portal, Christian Committee, etc.), adding resume experience coming ingratiated in a positive community driving campus.

can be found here: tinyurl.com/SenatorChowApp

is interested in CS opportunities specifically, Senator's office is working to develop a platform similar to on campus for club recruitment and extracurricular involvement. As such, we need front-end coders and designers back end coders."

Public-Service Announcement I

Introduction for Introduction to Mathematical Thinking, a 2-unit course that aims to develop mathematical maturity and prepares for CS 70, is now live!

[/apply.imt-decal.org](http://apply.imt-decal.org). Applications are due on Friday,

to help make CS 70 more accessible, we're starting Intro to Mathematical Thinking, a 2-unit DeCal meant to introduce students to some ideas and concepts in discrete mathematics that they're tested on them in CS 70. The course will cover topics such as proof techniques, set theory, number theory, and combinatorics. We've worked with professors that have agreed to pick these specific topics.

For the full list of topics, along with the FAQs, at the website: <http://imt-decal.org>."

CS61B: Lecture #3 1

CS61B Lecture #3

Don't be forgiving during the first week or so, but try to get things committed by Thursday night. **DBC: Let us know if you can't get things to work!**

Right now, there are almost 60 people who have accounts but do not have repositories. You cannot hand anything in without the code, so get this part of the lab done!

There are about 950 students with accounts, which is substantially more than the enrollment + waitlist. You must have an account to create a repo, which you need to turn things in!

The lab is crowded, so I may very well start dropping people who are not doing the labs and homework.

Encourage signing up for classes with conflicting lectures, but be aware there is a way to seek an exception. You will have a final exam, so if you have a lecture conflict; we do not consider such conditions grounds to take an alternative final.

07:10 2018

CS61B: Lecture #3 3

How do We Know If It Works?

Testing refers to the testing of individual units (methods, classes) rather than the whole program.

For unit testing, we mainly use the JUnit tool for unit testing.

testYear.java in lab #1.

Testing refers to the testing of entire (integrated) set rather than the whole program.

For integration testing, we'll look at various ways to run the program against test cases and checking the output.

Testing refers to testing with the specific goal of checking for regressions, enhancements, or other changes have not introduced regressions).

07:10 2018

CS61B: Lecture #3 5

Simple JUnit

JUnit package provides some handy tools for unit testing. The annotation `@Test` on a method tells the JUnit machinery to run this method.

JUnit in Java provides information about a method, class, or package that can be examined within Java itself.)

JUnit methods with names beginning with `assert` then allow us to check conditions and report failures.

e.]

Selection Sort

```
Sorts A[L..U], with all others unchanged. */
public void sort(String[] A, int L, int U) {
    {
        int indexOfLargest(A, L, U);
        swap(A, indexOfLargest, U);
        /* [k] with A[U] */
        /* Sort items L to U-1 of A. */
    }
}
```

```
int indexOfLargest(String[] V, int i0, int i1) {
    int i = i0;
    for (int k = i0 + 1; k <= i1; k++)
        if (V[k].compareTo(V[i]) > 0)
            i = k;
    return i;
}
```

Selection Sort

```
Sorts A[L..U], with all others unchanged. */
public void sort(String[] A, int L, int U) {
    {
        int indexOfLargest(A, L, U);
        swap(A, indexOfLargest, U);
        /* [k] with A[U] */
        /* Sort items L to U-1 of A. */
    }
}
```

```
int indexOfLargest(String[] V, int i0, int i1) {
    int i = i0;
    for (int k = i0 + 1; k <= i1; k++)
        if (V[k].compareTo(V[i]) > 0)
            i = k;
    return i;
}
```

Testing sort

Easy: just give a bunch of arrays to sort and then verify that they each get sorted properly.

Make sure we cover the necessary cases:

• **Base cases.** E.g., empty array, one-element, all elements the same.

• **Edge cases.** E.g., elements reversed, elements in order, one pair of elements reversed,

Selection Sort

```
Sorts A[L..U], with all others unchanged. */
public void sort(String[] A, int L, int U) {
    {
        int indexOfLargest(A, L, U);
        swap(A, indexOfLargest, U);
        /* [k] with A[U] */
        /* Sort items L to U-1 of A. */
    }
}
```

Well, OK, not quite.

Selection Sort

```
Sorts A[L..U], with all others unchanged. */
public void sort(String[] A, int L, int U) {
    {
        int indexOfLargest(A, L, U);
        swap(A, indexOfLargest, U);
        /* [k] with A[U] */
        /* Sort items L to U-1 of A. */
    }
}
```

```
int indexOfLargest(String[] V, int i0, int i1) {
    int i = i0;
    for (int k = i0 + 1; k <= i1; k++)
        if (V[k].compareTo(V[i]) > 0)
            i = k;
    return i;
}
```

Selection Sort

```
Sort(A[L..U], with all others unchanged. */
Sort(String[] A, int L, int U) {
    indexOfLargest(A, L, U);
    swap = A[k]; A[k] = A[U]; A[U] = tmp;
    U-1); // Sort items L to U-1 of A
}
```

Iterative version:

```
Sort(String[] A, int L, int U) {
    indexOfLargest(A, L, U);
    swap = A[k]; A[k] = A[U]; A[U] = tmp;
}
```

[i0].compareTo(V[k]) > 0) return i0; else return k;

// Deepest iteration
- 1; i >= i0; i -= 1)
```

07:10 2018

CS61B: Lecture #3 22

Finally, Printing

```
a one line, separated by blanks. */
print(String[] A) {
for (int i = 0; i < A.length; i += 1)
    System.out.print(A[i] + " ");
System.out.println();

// Produced a new syntax for the for loop here:
// for (int s : A)
//     System.out.print(s + " ");
// You like, but let's not stress over it yet! */
```

07:10 2018

CS61B: Lecture #3 24

Find Largest

```
0<=k<=I1, such that V[k] is largest element among
V[I1]. Requires IO<=I1. */
indexOfLargest(String[] V, int i0, int i1) {
}
;
(i0 < i1) */ {
indexOfLargest(V, i0 + 1, i1);
[i0].compareTo(V[k]) > 0) ? i0 : k;
[i0].compareTo(V[k]) > 0) return i0; else return k;
```

into an iterative version is tricky: not tail recursive.
the arguments to compareTo the first time it's called?

07:10 2018

CS61B: Lecture #3 19

Iteratively Find Largest

```
0<=k<=I1, such that V[k] is largest element among
V[I1]. Requires IO<=I1. */
indexOfLargest(String[] V, int i0, int i1) {
}
;
(i0 < i1) */ {
indexOfLargest(V, i0 + 1, i1);
[i0].compareTo(V[k]) > 0) ? i0 : k];
[i0].compareTo(V[k]) > 0) return i0; else return k;
```

```
// Deepest iteration
...?; i ...?)
```

07:10 2018

CS61B: Lecture #3 21

Iteratively Find Largest

```
0<=k<=I1, such that V[k] is largest element among
V[I1]. Requires IO<=I1. */
indexOfLargest(String[] V, int i0, int i1) {
}
;
(i0 < i1) */ {
indexOfLargest(V, i0 + 1, i1);
[i0].compareTo(V[k]) > 0) ? i0 : k];
[i0].compareTo(V[k]) > 0) return i0; else return k;
```

```
// Deepest iteration
- 1; i >= i0; i -= 1)
[i0].compareTo(V[k]) > 0) ? i : k];
```

07:10 2018

CS61B: Lecture #3 23

Your turn

```
void rotate(int[] A) {  
    // Rotate elements A[k] to A[A.length-1] one element to the  
    // right, where k is the smallest index such that elements  
    // from index k through A.length-2 are all larger than A[A.length-1].  
}
```

```
void moveOver(int[] A) {  
    // ...  
}
```

Another Problem

Given an array of integers, A , of length $N > 0$, find the smallest index, k , such that elements at indices $\geq k$ and $< N - 1$ are greater than or equal to the element at index k . For example, if $A = \{3, 0, 12, 11, 9, 15, 22, 12\}$, then $k = 3$.

For example, if $A = \{3, 0, 12, 11, 9, 15, 22, 12\}$, then $k = 3$.

For example, if $A = \{3, 0, 12, 11, 9, 12, 15, 22\}$, then $k = 4$.

For example, if $A = \{3, 0, 12, 11, 9, 12, 15, 22\}$, then $k = 4$.

For example, if $A = \{3, 0, 12, 11, 9, 15, 22, -2\}$, then $k = 0$.

For example, if $A = \{3, 0, 12, 11, 9, 15, 22, -2\}$, then $k = 0$.

For example, if $A = \{4, 3, 0, 12, 11, 9, 15, 22\}$, then $k = 3$.
